

## TC-202

### Hot Vat Resin Emulsifier

TC-202, Concentrated Resin Emulsifier, is a built surfactant system that is the perfect product for general tank cleaning. The product eliminates the need for pre-solving and is especially effective for removing fresh latex and resins, fatty acids and oils, and lube oils. The proprietary surfactant system defoams when used at temperatures above 140° F, rinses off freely leaving no film, and is completely biodegradable.

TC-202 may be used in all tank cleaning operations and is particularly suited for use in re-circulating hot vat systems.

Begin with an 6:1 concentration with water. Assuming success at this ratio, try 8:1 and 10:1 until performance is deminished. Then add more concentrate. Document actual dilution ratio for future reference.

### SPECIFICATIONS FOR TC-202

Appearance.....	Clear, Red liquid concentrate
pH.....	13.0 ± .5
Specific Gravity.....	1.07
Flashpoint.....	>200 F
Use Dilution.....	Up to 10:1 with water
Foam.....	None above 145° F
Hardwater Tolerance.....	Excellent
Detergency.....	Excellent
Resin Removal.....	Excellent
Storage Stability.....	Excellent, 1 year under normal conditions
Freeze-Thaw Stability.....	Will freeze usable after thawing with no change in performance. Agitate after thawing.
